

TEAM 2: THE TECH DEBATE

SCENARIO: “Buy vs. Build”

THE SITUATION: Your company needs a “Ticketing Support System” (like Jira).

- **Option A (Buy):** Pay \$5,000/month for “Zendesk”. It works immediately, but you can’t customize it much.
- **Option B (Build):** The Dev Team says “We can build our own for free in 2 months!” (It will be exactly what we want).

YOUR MISSION: You are the Tech Consultants. You know that “2 months” usually means “6 months”. But \$5,000/month is a lot of money.

DISCUSS & SOLVE:

1. **The Analysis:** List 2 Risks of Building it yourselves. (Maintenance? Bugs?)
2. **The Analysis:** List 2 Risks of Buying it. (Cost? Data dependency?)
3. **The Verdict:** Which one do you choose for a *Startup* vs a *Big Bank*?

OUTPUT: Give us your final recommendation: **Buy or Build?** And One Reason Why.
