

TEAM 5: THE TEAM CONFLICT

SCENARIO: “The Feature Refusal”

THE SITUATION:

- **The Business Analyst (BA)** wrote a requirement: “*The search bar must autocomplete names instantly.*”
- **The Senior Developer** replies: “*That will make the database crash. I’m not doing it. It’s stupid.*” They are now arguing in the Slack channel.

YOUR MISSION: You are the Project Managers. You need to de-escalate this. The BA is technically right (users want it). The Dev is technically right (it’s risky).

DISCUSS & SOLVE:

1. **The De-escalation:** Who do you talk to first?
2. **The Technical Compromise:** Is there a way to have autocomplete *without* crashing? (Maybe wait until 3 letters are typed?)
3. **The Culture:** How do you stop them from fighting in public Slack channels?

OUTPUT: What is your **Resolution Plan**? How do you get the feature built without breaking the team?
